

QuickBooks to QuickBase Integration

Many businesses use QuickBooks for their financial information but manage operational data in a different application. When the two systems do not communicate with one another, it takes extra work to enter data twice and to verify that both sides are in synch. This method is inefficient and wastes staff time and resources. What's more, it increases the likelihood of errors.

The solution is to use QuickBase for managing operational data and integrate it with QuickBooks, linking business processes with accounting. Data then flows smoothly and accurately from the source directly into the financial application.

QuickBase is a secure and powerful online database, brought to you by Intuit — the maker of QuickBooks. Since QuickBase is a web-based service, it can be implemented rapidly without the usual installation, training and support issues. QuickBase is easy to use and customize to your business processes; no technical skills are needed.

QuickBase Links Business Processes with Accounting

- T&E — Reimbursement and Billing
- Sales/Order — Transaction Recording
